# LIVESTOCK PRODUCTION AND MANAGEMENT

## Recent Trends and Future Prospects

**Readership:** Useful for under-graduates, graduates, and post-graduates, researchers, faculties , planners and other related in the field of Livestock Technology, Livestock Production and Management, Animal Breeding and Genetics, Dairy Science and Extension Education

There has been a tremendous increase in the production of livestock products and this is expected to continue in the coming future. This is especially in developing countries. The greatest increase is in the production of poultry and pigs, as well as eggs and milk. Livestock production can make good use of resources, some of which may otherwise not be used, and contributes high quality protein and important micronutrients to the human diet.
